

EXPERIMENT – 12

Study of Camera Phishing Using an Open-Source GitHub Tool in Kali Linux (Educational Demonstration)

Aim:

To study the concept of camera phishing attacks using an open-source GitHub tool in Kali Linux in order to understand privacy threats and the importance of secure user awareness.

Software Requirements:

- **Host Operating System:** Windows / Linux / macOS
- **Virtualization Software:** Oracle VirtualBox
- **Guest Operating System:** Kali Linux
- **Study Tool:** Open-source GitHub camera phishing framework
- **System Requirements:**
 - RAM: Minimum 4 GB (8 GB recommended)
 - Disk Space: Minimum 30 GB
 - Processor: Intel/AMD with Virtualization support

Procedure:

Step 1: Start Kali Linux Virtual Machine

1. Open Oracle VirtualBox.
2. Start Kali Linux.
3. Log in using Kali credentials.

Step 2: Study the Open-Source Tool

1. Access an open-source GitHub repository related to camera phishing (educational purpose).
2. Review the documentation to understand:
 - How fake permission prompts are created
 - How user interaction is exploited
 - Ethical limitations of such tools

Step 3: Understand the Attack Workflow

1. Analyze how phishing pages request camera permissions.
2. Observe how browsers handle camera access requests.
3. Study how attackers misuse user trust.

Step 4: Simulated Demonstration

1. Perform a **local, consent-based simulation** using test accounts.
2. Observe how camera permission prompts appear.
3. Analyze user response behavior.

Step 5: Analyze Security Implications

1. Identify risks related to:
 - Unauthorized camera access
 - Privacy leakage
 - Social engineering
2. Discuss how modern browsers and OS security attempt to mitigate such attacks.

Step 6: Study Prevention Techniques

- Browser permission management
- User awareness and training
- HTTPS and trusted domains
- OS-level camera access controls

Output:

```
└─$ sudo su
[sudo] password for kali:
(root@kali)~[/home/kali]
└─$ git clone https://github.com/techchipnet/CamPhish.git
fatal: destination path 'CamPhish' already exists and is not an empty directory.

(root@kali)~[/home/kali]
└─$ ls

Result:

The study of camera phishing using an open-source GitHub tool was successfully completed in Kali Linux.

The experiment enhanced understanding of social-engineering attacks and emphasized the importance of user awareness and privacy protection.
